

## CABLE TO METAL SURFACE, CATHODIC, VH, CAST IRON PIPE, #6 SOLID, 10" PIPE

### CATALOG NUMBER

**CAVHT1G10**

nVent ERICO Cadweld Cathodic Connections are the preferred method of exothermically welding cathodic protection anode leads to pipes (steel or cast iron), tanks, and other structures. Cathodic protection systems are designed to prevent galvanic corrosion along a pipeline or in various structures. nVent ERICO Cadweld Cathodic Connections use a special welding material alloy to minimize heat effect on the steel, which is especially important on thin wall and high stress pipes.

### FEATURES

Forms a permanent, low resistance connection

Provides a molecular bond

nVent ERICO Cadweld Exothermic Connections are rated with the same current capacity as the conductor

Portable installation equipment with no external source of power required

Installers can be easily trained to make nVent ERICO Cadweld Exothermic Connections

Connections can be visually inspected

### PRODUCT ATTRIBUTES

Mold Family: VH Mold Family

Connects To: Cast Iron Pipe

Conductor Size: #6 Solid

Conductor Outer Diameter, Nominal: 4.11mm

Pipe Size: 10in

Outer Diameter (OD): 281.9mm

NB/DN: 250

Mold Split: Vertical

Split Crucible: No

Wear Plates: No

|                                                              |
|--------------------------------------------------------------|
| Mold Only: No                                                |
| Welding Material: CA25XF19 and CA25PLUSXF19, Sold Separately |
| Handle Clamp: Mini EZ Attached                               |
| Price Key: T                                                 |
| Ease of Use: Preferred                                       |

ADDITIONAL PRODUCT DETAILS

For applications such as computer room, tunnel or other low-ventilation areas, specify a smokeless nVent ERICO Cadweld Exolon mold. Add an XL prefix to the standard mold part number when ordering (for example, a TAC2Q2Q becomes XLTAC2Q2Q). Similarly, nVent ERICO Cadweld Exolon welding material is also designated by the XL prefix (for example, 150 becomes XL150).

A test weld should be made to check for the possibility of burn through on thin sections and to determine detrimental metallurgical effects.

Use XF19 or PLUSXF19 welding material on connections to ductile iron.
