

Compact LED Light FAQ

We connect and protect

What comes with the lights?

Much like our “EL” lights the “CEL” lights are sold as individual components so you only need to pay for what is needed. When ordering the part numbers CEL550 or CEL550M you receive the light and two screws for a screw fixation application.

Do I need to order anything specific if I want to screw these into place?

The CEL550/CEL550M lights come standard with feet that have mounting holes for screw fixation. Two screws are provided for screw fixation mounting.

What is the difference between the CEL550 and CEL550M?

The CEL550 is switch activated with a power switch on the light to turn it on and off. The CEL550M has a motion activated sensor on it that will automatically turn on the light.

How long does the motion activated light stay on?

The CEL550M will stay illuminated for 3 minutes from when it senses motion.

Can I connect multiple CEL550/CEL550M lights in line?

Yes, using the CELC1001TBUL connector cable you can operate up to 4 lights on one line.

Will the first light in the chain line turn on the others “downstream”?

No, the switch on each light only controls that one light. Any lights “downstream” will still need to be turned on via the switch or motion sensor.

What power can the CEL550/CEL550M lights be wired to?

The CEL550/CEL550M lights are “universal voltage” and can be powered by 24 V – 240 V, AC/DC, 50 – 60 Hz Electricity.

What certification is this light rated to?

The CEL550/CEL550M is UL recognized to these North American standards (File number E61997):

- UL 508
- CSA – C22.2 No. 14- 95
- Mexico NOM Certificate Number ULM-NOM-13147

The US and Canadian standard is the same as the LEDA/LEDD lights being UL recognized, not UL listed. The competitors’ compact LED lights are also UL recognized to Canadian and US standards, meaning we are in line with them from a competitive stance.

Can I wire a door switch to the light?

Yes, door switches such as the ALFSWD and DSW01 can be hard wired in line prior to the light to control the power if desired.

How does the CEL550 price compare to the LEDA/LEDD price?

The new light list prices are on average 27% lower than the old lights with exception of the LEDA1M35.

Old Lights		New Lights						
Includes light and connectors		(old light kit included Connectors)						
Motion Activated	List price	Light	List Price	Connectors	List Price	Magnet Kit	List Price	Package Total List Price
LEDA2S35	\$330.00	CEL550M	\$215.00	CELCN1	\$25.00			\$240.00

								27%

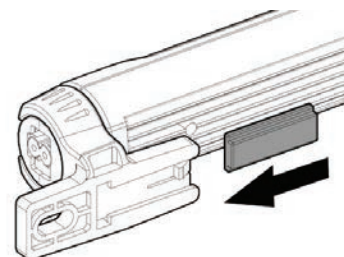

Do we still have inventory of the LEDA/LEDD lights?

We will have limited stock of the LEDA/LEDD lights that we still need to sell through for the rest of the year. The SKUs with the highest inventory that we will need to work through are LEDA1S35, LEDA2S35 and LEDD2S35.

When would I need to purchase a CELCN1 or CELA02MF?

CELCN1: The CELCN1 is a two part, male and female electric cord adapter set for making your own custom length power cords. These could be used to make a input power cord or an extension cord to the length you desire.

CELA02MF: The CELA02MF is a package of two magnets that slide into the standard light mounting feet if you wish to mount your CEL550/CEL550M lights to a metallic surface.

Could I use the CELA02MF to magnetically mount the light to a non-magnetic surface?

Yes, the ELA02CF is a set of two self-adhesive, metal plates that can be applied to a non-magnetic surface, which allows for the CELA02MF magnetics to connect to.
